

ABSTRACT OF THE DISCLOSURE

A module for forming a modular luminaire, in cooperation with the second module, has a housing with cavity. The housing is designed to be mounted within a luminaire frame or to one end of a luminaire shell. the module includes at least one bulb
5 holder that is supported by the housing and multiple rotatably adjustable reflector holders, also supported by the housing. The holders are each designed to engage one end of an elongated reflector so as to support it. The module also includes at least one adjustable knob that allows the rotational position of at least one of the reflector holders to be adjusted.
